

# Body Sculpting

With Alpha Sculpt

A safe, affordable, and natural alternative to invasive, uncomfortable, and lengthy procedures. Results are permanent and cumulative when coupled with a healthy lifestyle. The Alpha Sculpt approach to body sculpting uses ultrasonic cavitation technology - also called fat blasting or laser lipo.

The first step in the process uses a hand held wand to deliver an ultrasonic sound wave. The wave empties the fat cells of the arms, back, belly, love handles, legs or backside. Gel to help the ultrasound wave transfer when the wand is placed against the skin. Other than the wand being a bit cold and the sound of the wavelength, there is no discomfort as fat is sculpted away.

The second step uses a combination of red light and radio frequency to deliver a slight electrical current and heat. This has an immediate and visible constricting effect that kick starts the cells into producing additional collagen and elastin. The results are firmer, tighter, more radiant skin. Body sculpting may result in losing 3 - 6 inches immediately and in session. This technology works best when coupled with diet, exercise and healthy choices. Results are permanent as long as you continue to use or burn off whatever calories you take in each day.
