

# Anti-aging

A safe, natural alternative to invasive procedures featuring a comfortable, 2 step process. Effective on all genders for the face, neck, and chest. Immediate results that will continue to improve the look, feel and tone of skin for 3 days afterwards with results lasting 3-6 weeks. Results are cumulative with ongoing sessions.

## Step 1 : Microcurrent

A tiny electrical current works to bolster and smooth the muscles by increasing cellular activity. This step is painless and comfortable. Brows are lifted, cheekbones become contoured, and the jawline becomes tighter and more defined.

## Step 2 : Red light + radio frequency

Radio frequency +red light energy reaches deep into the layers of the skin. You will feel a gentle heat that is stimulating collagen production deep in the cellular mitochondria of the skin. This results in an instant face lift, and because it reaches deep into the skin, it is especially good at targeting loose, saggy skin. A 2008 study showed that exposure to radio frequency increases collagen and elastin production for up to two months after treatment, resulting in tighter skin and a youthful radiance.

The energy to change your life
